

UTKARSH KUMAR

Senior Frontend & Mobile Engineer | React · React Native · TypeScript

Pune, India | +91 7076182140 / 9264499684 | utkarshkr1710@gmail.com | linkedin.com/in/utkarshkr1710

TECHNICAL SKILLS

- React.js / React Native
- JavaScript / TypeScript
- Redux & Context API
- React Navigation
- OAuth2, JWT, Biometrics
- OWASP & Secure Coding
- REST APIs / GraphQL
- Java / Spring Boot
- Firebase Crashlytics
- Push Notifications (FCM)
- Jest / React Testing Library
- Detox / Appium
- CI/CD (Jenkins / GitLab)
- Git / GitHub
- Figma (Design Handoff)
- Performance Profiling
- Lazy Loading / Code Splitting
- Agile / Scrum

KEY ACHIEVEMENTS

- Reduced production bugs 30% via structured code reviews
- Recognised by IDFC First Bank leadership for technical excellence
- Architected a shared React & React Native component library across IDFC First Bank's retail & wholesale apps, standardising UI patterns and cutting feature delivery time by 25%
- Delivered features for 10M+ user banking platform

EDUCATION

B.Tech — Computer Science

Sikkim Manipal Institute of Technology

Graduated: 2019

LANGUAGES

- English — Professional
- Hindi — Native

PROFESSIONAL SUMMARY

I'm a frontend and mobile engineer with 6.5 years of experience, most of it spent building banking products people actually use every day. At Xebia, I've been part of the team working on **IDFC First Bank's** retail and wholesale apps — everything from credit card journeys and tax payments to login flows and security fixes. I work comfortably across both **React** (web) and **React Native** (mobile), and I care a lot about writing clean, maintainable code and mentoring the engineers around me.

WORK EXPERIENCE

Senior Consultant — Frontend & Mobile

Xebia (Client: IDFC First Bank) | React · React Native · TypeScript · Redux · OAuth2 · JWT · CleverTap · Firebase Crashlytics · Push Notifications · Figma · Jest · Spring Boot

March 2022 – Present | 3+ Years | Pune, India

- Worked on **IDFC First Bank's retail banking app** (React Native & React) — features like Pay CC Bill, Know My Card, Credit Card Closure and Mini-Statements used by over **10M users** on iOS & Android.
- On the wholesale side, built modules including **Rocket Account opening, Fixed Deposits, Cashflow Summary, Tax Payments and Borrowings** — these were complex, multi-step journeys that needed close coordination with backend and product teams.
- Took full ownership of the **Login & Signup journeys** — OAuth2, JWT, biometric login, secure token storage — and made sure everything was OWASP compliant.
- Found and fixed several **security vulnerabilities** including token leakage and insecure storage issues. No incidents post-fix.
- Set up **CleverTap** event tracking across retail flows so the product team could actually see where users were dropping off and make informed decisions.
- Used to work directly from **Figma** with designers — early alignment meant fewer back-and-forths and cleaner implementation.
- Built a **shared component library** across retail and wholesale apps that the whole team started using — cut down repetitive work and made new screens faster to ship by around **25%**.
- Did regular **code reviews** and worked with junior engineers on performance issues — over time this brought production bugs down noticeably, around **30%**.
- Integrated **Firebase Crashlytics** and **push notifications** for banking alerts — helped catch crashes early and improved how we communicated with users.

DOMAINS

- Retail Banking
- Wholesale Banking
- Fintech / Payments
- Enterprise Mobile Apps
- Authentication & Security
- Design Systems

SOFT SKILLS

- Technical Mentoring
- Code Review Leadership
- Cross-team Collaboration
- Agile / Scrum
- Stakeholder Communication
- Problem Solving

Senior Developer — React Native

[GetWork](#) | [React Native](#) · [JavaScript](#) · [Firebase](#) · [Crashlytics](#) · [Push Notifications](#) · [Node.js](#) · [Figma](#) · [Redux](#) · [Git](#)

July 2021 – March 2022 | 9 Months

- Built the entire app from scratch — **GetWork** is a job platform similar to Naukri where users can search jobs, apply, and track their applications through the hiring pipeline.
- Added **real-time chat** (one-to-one and group) using Firebase, which also powered a college community feature where students, alumni and recruiters could connect within their college network.
- The **job tracking dashboard** showed live status updates — Applied, Shortlisted, Interview, Offer — which kept users engaged and reduced drop-off.
- Worked closely with designers on **Figma** and integrated **Node.js APIs** throughout — good communication between design, frontend and backend made things move faster.
- Built a component library that the team reused across screens — saved a lot of repetitive work and made onboarding new screens about **25% quicker**.
- Added **Crashlytics** for monitoring and **FCM push notifications** for job alerts and recruiter messages — both made a real difference to app quality and user re-engagement.

React Native Developer

[Dror Labs](#) | [React Native](#) · [JavaScript](#) · [REST APIs](#) · [Git](#) · [Agile](#)

August 2019 – July 2021 | 2 Years

- Worked on mobile apps for enterprise clients — the most notable being **Max Life Insurance**, where the bar for quality and stability was high.
- Spent a fair amount of time on **performance** — profiling renders, fixing unnecessary re-renders, lazy loading screens — the kind of work that isn't glamorous but users notice.
- Integrated various **third-party SDKs and APIs** and tried to do it cleanly so future devs didn't have to untangle a mess when things needed updating.
- Started a **code review culture** on the team — it wasn't a process before, and making it consistent made a real difference to the quality of what went out to production.
- Built reusable components that ended up being used across multiple client projects — less duplication, more consistency.
